PUBLIC HEALTH  
DELHI

# Advance Pediatric Nutrition Workshop

7<sup>th</sup> to 9<sup>th</sup> May 2010

INDIAN INSTITUTE OF PUBLIC HEALTH - DELHI

## BACKGROUND

**Background:** Indian Institute of Public Health-Delhi is pleased to announce a three days workshop on “Advanced Pediatric Nutrition”.

India has a growing workforce of Nutritionist/Dietitians, Doctors and Nurses specializing in pediatric care. For the dietitians, their basic training in clinical nutrition provides limited exposure to the management of complex childhood diseases. The same is true for the medical teams taking care of children with complicated childhood diseases as dietary interventions are not emphasized in the medical curriculum. To address this deficiency, a practical training in providing optimal nutrition support to this segment of vulnerable children is desirable.

To partially address this deficiency in the training of the professionals and to provide holistic care to children we plan to organize a workshop for enhancing technical expertise in the field of Advanced Pediatric Clinical Nutrition.

## Objectives of the workshop

1. To provide a comprehensive training in nutritional care for children with diseases requiring specific dietetic interventions. (Apart from the general dietetic practices in pediatric health care, the program will focus on nutritional management of some rare yet serious childhood diseases).
2. To enable the professionals develop a sound knowledge base on advanced pediatric nutrition.
3. To create a web based interest group on advanced pediatric nutrition as a platform to enable the professionals discuss issues related to advanced pediatric nutrition.

## Contents

### Day 1

- General Principles in Pediatric Nutrition
- Nutritional Requirements and diet management in
  - Failure to thrive
  - Childhood Obesity
  - Diabetes in children and adolescents
  - Celiac Disease
