About the workshop

Operations Research (OR) or Implementation Research (IR) is the application of systematic research techniques to improve health programs indicators. The purpose of OR provide information for management decision-making for better program planning and implementation. OR enhances program quality and facilitates efficient resource use. Successful OR is characterized by a close collaboration between public health personnel, program managers and researchers throughout the study. The value of OR is that it provides empirical evidence to support program decisions and thus advance optimal utilization of resources. Through innovative and interactive pedagogic techniques the course will augment the knowledge and skills of the participants in fundamentals of design and conduct of OR. At the end of training, participants will be able to describe the concepts of Operations Research, identify and write problem statement, good research questions, apply knowledge and skills of using different study designs and highlight the prospects of using OR in the field of public health and draft operations research proposal.

Who should attend?

This workshop would be suitable for postgraduate students of health sciences, researchers and project coordinators involved in public health research specifically field trials, clinicians, any health professionals wanting to understand the basics of conducting an Operations research. medical writers, counsellors, social workers, NGO functionaries, professionals working in CSR organizations, social scientists, research scholars and students who are working in the areas of public health, clinical care & support, development sector etc.

The seats are limited therefore, registrations will be confirmed first come first serve basis.
