PROGRAM OVERVIEW

Traditional Medicine has evolved from treatment of the patients to newer aspects like artificial insemination, organ donation, genetical manipulation etc. The increasing complexities in medicine has made healthcare workers encounter ethical problems in various aspects of patient care. The resolution of these problems can be done with maximizing the benefits of the patient and minimizing harm to the patients. Ethics has been a part of medicine. Every doctor on the completion of their studies have to take Hippocratic Oath which is based on ethics. Rooted in this Oath are the 4 tenets of medical ethics: non-maleficence, autonomy, beneficence and justice. The ethical quandary can be bypassed and doctor patient relationship can be improved if the patient has been informed about his treatment options, the pros and cons of the treatment, their right withdraw consent to any procedure, surgery and treatment at any time and for any reason.

Laws are made to ensure human behaviour is for the benefit of the society. Both healthcare and law are intertwined because their nature is for betterment of society. Medical laws, protect the rights of the patients on confidentiality, other torts related to medical treatment and any medical malpractice towards the patient. Medical law and ethics are complementary to each other in this aspect as any breach of ethics and law is unacceptable in medical profession. Medical ethics are a set of moral standards to help the patient get the care he is meant to get. You cannot work in healthcare field without understanding the legal implications.

Law studies can help physicians better understand and address ethical questions and can help better decision making. Considering the high level of decision making and the legal implications arising from those decisions, it's important for doctors to understand the how the law works. The knowledge of law is the difference between a man being successful or unsuccessful in his occupation. This course is designed to give the healthcare workers a basic understanding of ethics and the laws to understand the rights of the patient and the healthcare workers themselves.

PUBLIC HEALTH FOUNDATION OF INDIA (PHFI)

PHFI is a public private initiative that has collaboratively evolved through consultations with multiple constituencies including Indian and international academia, state and central governments, multi & bi-lateral agencies and civil society groups. PHFI is a response to redress the limited institutional capacity in India for strengthening training, research and policy development in the area of Public Health.

The Training Division at PHFI has been implementing more than 25 Capacity Building Programs that aim to upgrade the knowledge, skills and core competencies of healthcare professionals in clinical conditions and various public health domains. We have trained 32,000+ Healthcare Professionals, of which more than 10,000 are affiliated to the Government Sector. We have a network of 108 National Experts, 621 Faculty Members, 173 Observers, 600+ Training Centres in 121 Cities, 28 States & Union Territories across India.

For more information visit: www.phfi.org
