About the course

The 21st century has seen a lot of transition in the health and development sectors, with the focus being on transformative education and leadership. This reform depends on development of leadership skills and change agents. While sound managerial skills ensure results in the short and medium term, the progress of a country is shaped by managers with a vision and inspired leadership abilities. Leadership is a complex multidimensional concept; strong leadership is critical for realizing the vision of transformed healthcare and development sectors. In these fields, leadership serves as an asset to face challenges and is an important skill to possess. In order to reach this goal, common leadership skills must be looked for among young as well as experienced professionals studying or working in these sectors.

This workshop aims to impart leadership skills to those in the health and development sectors. The participants at the end of the workshop would be the ability to demonstrate leadership attributes in their respective workplaces, so as to address the challenges and needs of the population.
